🚀 Built My Own JARVIS-Style AI Agent 🤖

Thrilled to share a project I've been working on — an autonomous AI agent that goes beyond basic chatbots and actually *thinks through problems step by step*.

Here's what it can do:

🧠 Break down complex queries with structured reasoning
🔍 Perform real-time web searches for accurate information
📊 Analyze data and extract meaningful insights
✅ Deliver clear, well-structured answers

💡 Key Highlights:

- Autonomous reasoning pipeline (THINK → SEARCH → ANALYZE → FINAL)
- Integrated real-time web search capabilities
- PDF document understanding and analysis
- Built using Groq (LLaMA 3.1), LangChain, and Streamlit

This project gave me a deeper understanding of how modern AI agents operate moving from simple Q&A systems to intelligent, decision-making assistants.

I'd love to hear your thoughts and feedback! 🙌
